

Production Supporting Systems in Factories

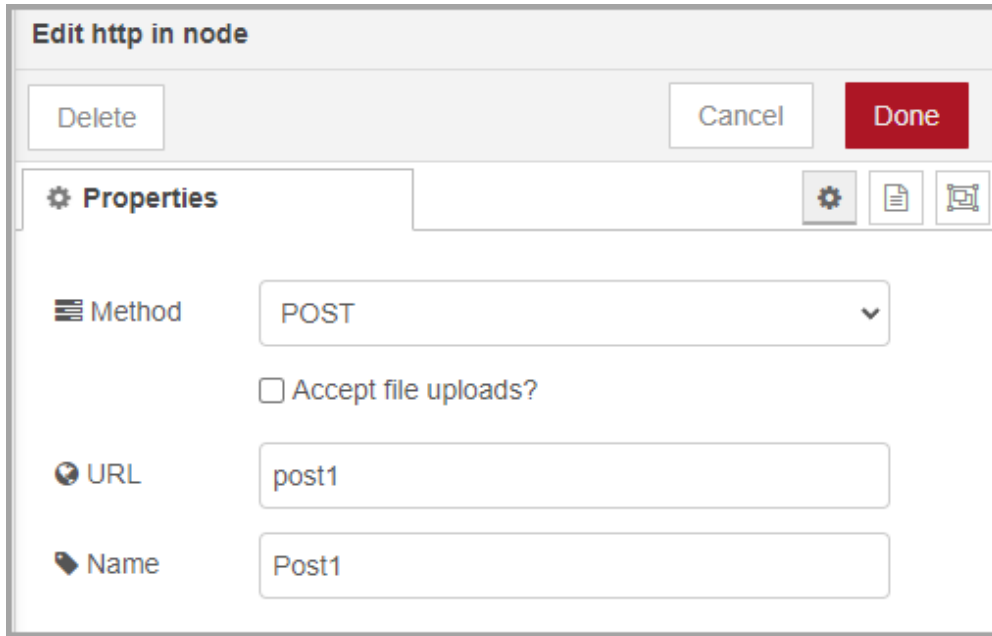

ระบบสนับสนุนการผลิตในโรงงานอุตสาหกรรม

Module 2-1: HTTP POST Server

- Create a server that receives `POST` requests.
 - Flow

- http in node

The screenshot shows a dialog box titled "Edit http in node". At the top, there are three buttons: "Delete", "Cancel", and "Done". Below the buttons is a tabbed interface with a "Properties" tab selected. The "Properties" tab contains the following fields:

- Method:** A dropdown menu currently set to "POST".
- Accept file uploads?:** An unchecked checkbox.
- URL:** A text input field containing the text "post1".
- Name:** A text input field containing the text "Post1".

- Send the transformed message back.
- Try sending the post requests to your friends public address.

⚙ Properties

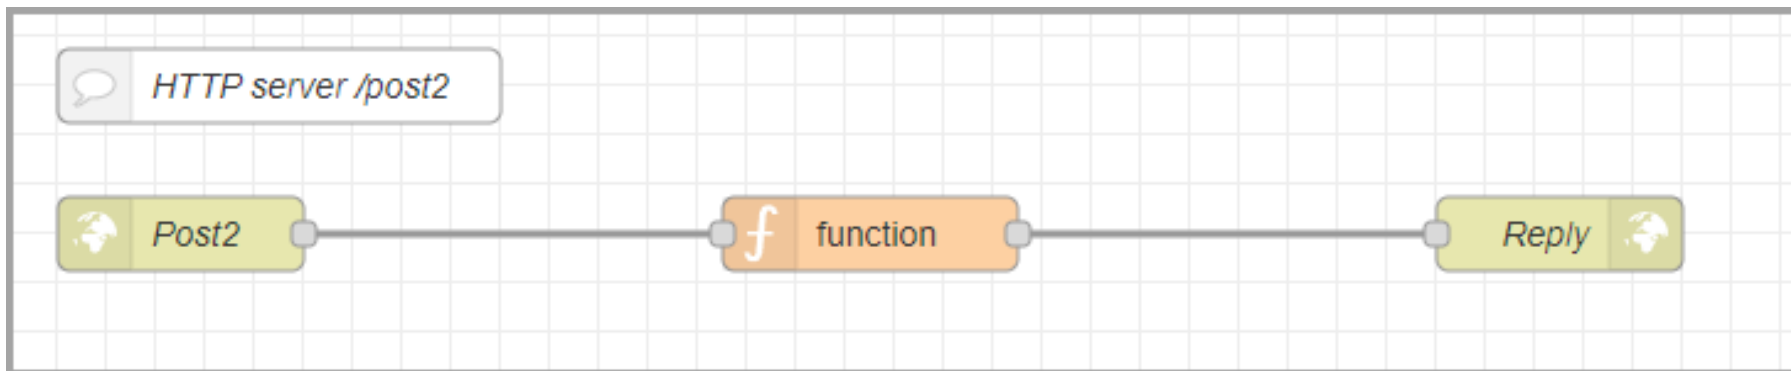

🏷 Name

≡ msg. payload = ▼ a_z I love you. ✕

≡ msg. topic = ▼ a_z ✕

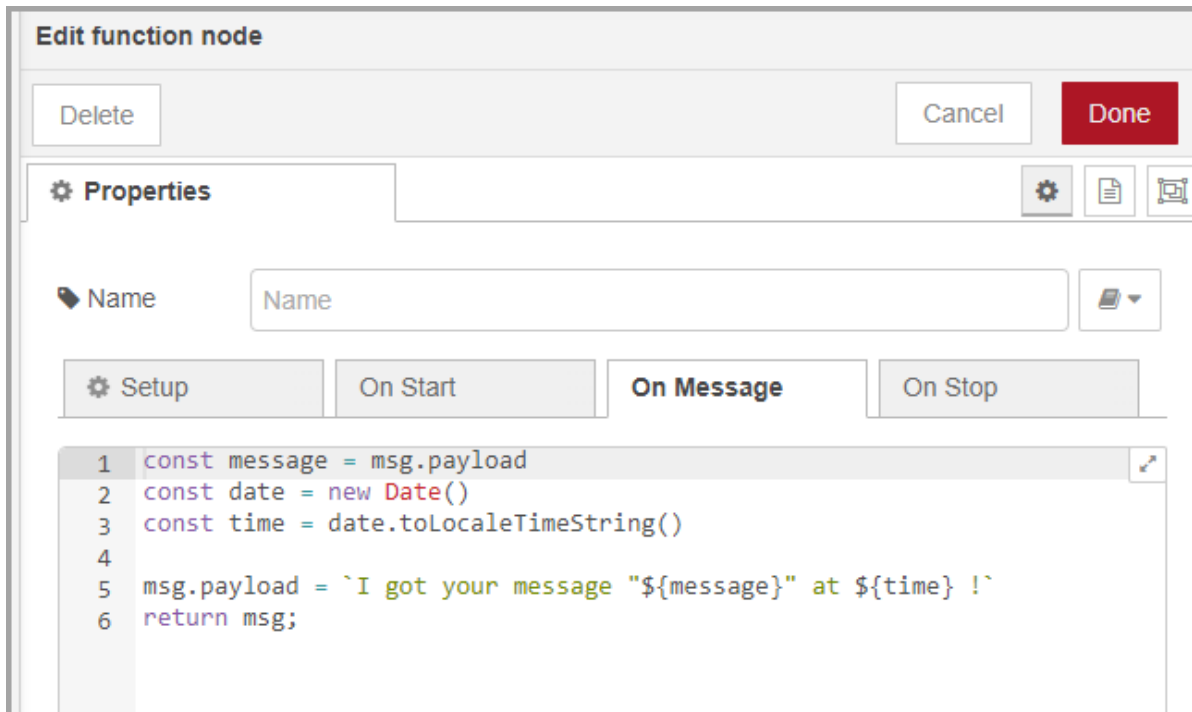

≡ msg. url = ▼ a_z http://localhost:1880/post1 ✕

- Create another url that response with dynamic content.
 - Flow

- `http in node`
 - `url = post2`

- function node

(code on the next page)

```
const message = msg.payload;  
const date = new Date();  
const time = date.toLocaleTimeString();  
  
msg.payload = `I got your message "${message}" at ${time} !`;  
return msg;
```

- Try send in a post message to `.../post2`.
- Also try sending a post message to your friend's public address.

Module 2-2: Line Notify

- ສ້າງກຸ່ມ LINE ກາຍໃນ Group
- ໄປທີ່ <https://notify-bot.line.me/en/>
 - Login (need to verify number on smart phone)
 - Go to My page
 - Click Generate token
 - Enter Token Name and select a chat room.
 - Copy the token and store it somewhere.

- Let send a line notification through Node-Red
 - Flow

- inject node

- Add `debug` node to see the output.
 - You can inspect the error.
- Try injecting to see if the notification.

Extra

- Make a server that send the message to `Line`.
 - The message comes from the `POST` request.
